## Summary of Qualifications

Strong mathematics background and ability to learn new techniques.

Desire to learn more and understand the mechanics of software.

Highly motivated to learn and strive for success in the workplace

Program Languages used: Python, C.

## Education

Jan 2020 - **Bachelor Degree: Computer Science**  
Jan 2023      WSU, Pullman, WA

## Projects

Feb 2023      **Meteor Shower**   
Washington State University

- A 2D game and one of my first group projects written in early 2023. As one of my first "bigger" projects with multiple people, I learned a lot with teamwork and organization.

## Experience

Aug 2020      **Glenn Terral Presidential Award**  
A scholarship offered at WSU for freshmen based on their academic strength. Taught me the importance of efficient work.

Jan 2020      **Extended Learning Internship**  
A semester long study directed towards a topic, and information/experiences were shared via a lecture given to a auditorium audience. Conducted my senior year of high school and gave me insight in the professional world.

Mar 2023 - **Family Resource Home Care Caregiver**  
Present      Family Resource is a home care agency where I'm currently getting licensed as a HCA. This was supposed to be just a summer job but the agency is very flexible with hours to accommodate university, so I'm continuing work with them.

May 2022 - **City of Moscow: Parks and recreation**  
Aug 2022      Manual work in parks and streets maintenance. This work created an appreciation for blue collar work, and helped build a strong work ethic to take care of the day's itinerary on time.
